

How to plan the making of the prototype

1. Write down the idea that you chose:
2. List 3 challenges that the making of the prototype provides.
3. Provide optional solutions to face the challenges you listed above.
4. Write the names of the participants and one added value that each of them brings to the group .
5. List the materials that stand at your use, write beside every material how is it going to be used in your prototype.
6. Make a sketch that describes the stages in which the prototype is going to be build and the materials that each stage involves.
7. Write down the stages of making the prototype
8. Write beside each stage how long should it take and who are the group members who are going to be incharge of it. Try matching between the added value that the participant brings to the group and between the task that he is incharge of.
